Reference: Customer Testimonial for Integrated Cutting Systems (ICS)

From: Mr. Ben Snyder, President at Snyder Metal Fabricating Ltd.

March 6, 2014

To Whom it may concern:

At Snyder Metal Fabricating, we pride ourselves on being able to provide top quality custom fabricated products to meet our customer requirements.

The first step in most of our projects involves cutting steel plate into the component parts used in the fabrication process. We depend on our plasma cutting machine to perform reliably to support our daily production needs, which is why we chose ICS as our supplier for plasma cutting equipment.

Ten years ago ICS took our old cutting machine and totally refurbished it to brand new condition. It was fitted with state-of-the-art cutting technology including a Hypertherm CNC and HPR260 plasma cutting system, which delivers excellent cut quality and dimensional accuracy.

ICS have continually provided dependable service for our plasma cutting machine, and any problems with the machine have been promptly fixed by ICS, usually on the same day. We have found ICS to be extremely professional and reliable as plasma cutting machine service experts, and our plasma cutting machine is still performing well after 10 years of service.

ICS also provide us with competitive pricing on plasma consumables, and the benefit of the Hypertherm PPLP (PlasmaPlus Loyalty Program) which rewards us with a free plasma torch each year and free machine service from ICS.

I would highly recommend ICS to any company who requires maintenance service for their plasma cutting machinery, or who are considering either upgrading their existing cutting machine or purchasing a new cutting machine !

A handwritten signature in black ink, appearing to read 'Ben Snyder', is written over a horizontal dashed line.
